

First 6 Billion GB-seconds / month	\$0.0000221 for every GB-second	\$0.27 per 1M requests
Next 9 Billion GB-seconds / month	\$0.00001989 for every GB-second	\$0.27 per 1M requests
Over 15 Billion GB-seconds / month	\$0.00001768 for every GB-second	\$0.27 per 1M requests

Memory (MB)	Price per 1ms
128	\$0.0000000028

These show the pricing for the Lambda Configuration used in production

AWS Cost Estimate for Serverless Layer

The screenshot displays the AWS Cost Explorer interface for the Serverless layer. At the top, there's a navigation bar with the AWS logo, user profile (Victor E), and search functionality. The main header shows the breadcrumb path: Billing and Cost Management > Pricing Calculator > Saved estimates > Serverless. Below this, the title "Serverless" is prominently displayed next to "Export" and "Settings" buttons.

A descriptive text states: "Workload estimate allows you to estimate the cost of specific workloads, applications, resources, and architectural changes." Below this, the "Usage (8)" section features a filter input ("Filter by: Account / Service / Region / Cost / State") and a dropdown menu set to "Group by: Service".

	Service > Usage lines	Group	Location	Account	Usage ...	State	Histori...	Estimated cost
☐	▶ AmazonSNS							US\$48.20 USD
☐	▶ AWSLambda							US\$3.30 USD
☐	▶ AWSQueueService							US\$0.95 USD
☐	▶ AmazonApiGateway							US\$2.64 USD

At the bottom, a "Summary" section provides a snapshot as of June 29, 2026:

- Before discount rates as of 29 June 2026 at 21:03 (UTC+1:00) shown
- Number of lines: 8/2000
- Historical cost: US\$0.00
- Estimated cost: US\$55.09
